**Abstract of JP10189247**

**PROBLEM TO BE SOLVED:** To provide an organic electroluminescent element with high luminescent efficiency and high luminance by interposing a layer containing a benzofluoranthene derivative between a pair of electrodes. **SOLUTION:** An organic electroluminescent element interposing at least one layer containing at least one kind of benzofluoranthene derivatives represented by formula I or formula II (wherein X1-X12 and X21-X32 show a hydrogen atom, halogen atom, straight chain, branched, or cyclic alkyl group or alkoxy group, a substituting or non-substituting aryl group), for example benzo [k] fluoranthene derivative, a benz [e] acephenanthrylene derivative, a benzo [j] fluoranthene derivative, a benz [a] aceanthrylene derivative as a luminescent layer is manufactured. The organic electroluminescent element with high luminance usable as a panel type light source of a back light or the like is obtained.
